## Module FIVE: Line Flashcards

To help you memorize your lines, you will create *Line Flashcards*. Using 3"x 5" index cards, write your *cue line* on the unlined side (front), and *your line* on the lined side (back). You do *not* need to write the stage directions. If the line before your line is super long, only write the last sentence of the character just before your line (the cue words).

Write your last name on the front of every card.

Write the card number on the front of each card so that each of your lines are numbered in the order they appear in the script. Write #1 on the first card, #2 on the next one, #3 on the next, and so on... You need the numbers so that, if you drop your cards, you can put them back in order.

Lastly, write the page number of the script that the line comes from on the back of the card. This is helpful if you have to look back at the script when you have a question.

Once you have all the cards written, you will hole punch them in the upper right-hand corner (try not to punch them too close to the edge), and then use a brass brad to secure the cards together.

Module FIVE: Grading Criteria

First, count the total number of lines you have in the script.

Next, create your set of line flashcards, using index cards (one side lined, one side unlined). Each set MUST include:

- Last Name on the front of *each* card.
- Card Number on the front of *each* card.
- Cue line on the front of *each* card.
- "Total Number of Lines" on the front of the *first* card.
- Page number on the back of *each* card.
- Your line on the back of *each* card.
- Hole Punch and brad the *entire set*.

    Then, in order to receive credit for this work, follow the appropriate instructions below:

Paper/Pencil

- Turn in your complete, physical set of line flashcards - one for each of your lines - on the assigned Friday.

Digital You will need to upload to the digital classroom the following on the assigned Friday:

- A picture of the front and back of the first card.
- A picture of the set of cards.
- Pictures of 5 additional cards from the middle.
- A picture of the front and back of the last card.

NOTE: BE PREPARED to produce the physical set of cards in case of a question.

Each COMPLETED card is worth an even percentage of 100%.

Examples:
If you have 10 lines, and fully complete 8 cards, you will get 80% credit.
If you have 5 lines, and fully complete 1 card, you will get 20% credit.
If you have 47 lines, and fully complete 44 cards, you will get 94% credit.

Total possible points: 100
